BATS

About The Bats

Bats are Mammals.

Bats have 2 legs, 2 long wings and sharp long claws and also bats have sharp teeth too.

Bats can not see. They are blind.

Bats can fly at night time but they don't like to fly in the daytime. They sleep at daytime.

There are so many different types of bats.

Some bats have black and brown fur. Other bats have different coloured fur.

Where do Bats live?

Bats live almost everywhere except for the Arctic and Antarctica. Also bats can be found in Woods, Mountains, Grassland, Farmland, Wetland, and Rainforest.

What do Bats Eat?

Bats are insectivores. They like to eat Beetles, Moths, Flies and Mosquitoes. Also insects are their main diet.

Some bats are Frugivores. They like to eat Pollen from Flowers, Figs, Mangoes, Dates and Bananas. Also Fruits are their main diet.

Hibernation

In the winter time some Bats move to warmer areas. Some bats hibernate. They can be found in caves, Buildings hanging up side down, curled up like furry little balls.

In the summer time Bats do not hibernate. Bats take a nap hanging up side down under the tree

Life Span

Bats can live 4 to 30 years.

Length and Weight

There are so many different types of bats with different lengths and weights.

Eurasian Noctule Bat is 4 to 5 and a half inches long and weighs a half ounce to 1 and a half ounces. Their wingspan is 12 to 18 inches.

Little Brown Myotis Bats can be 3 to 4 inches long and weigh up to half an ounce. Their wingspan is about 8 inches.

Fact About Bats

Bats use their hearing for flying and catching insects more than their eyes. This is called echolocation.
