PENGUINS

About Penguins

Penguins are birds.

Penguins are torpedo-shaped and flightless birds.

Some penguins are black and white, but many are colourful too.

Penguins have 2 legs and 2 webbed feet. They also have 3 toes and 2 flipper wings.

Penguins are good swimmers and can dive as deep as 120 meters.

Where do Penguins Live?

Penguins live in Antarctica and in other areas close to the south pole.

Penguins can also be found in Oceans and Tropical Islands.

What do Penguins Eat?

Penguins are Carnivores. They like to eat small fish, krill, squid and shellfish.

Hibernation

Penguins don't hibernate because they are always in the cold. But penguins do take naps in the winter.

Life Span

Emperor Penguins can live up to 20 years, and smaller penguins can live up to 6 years.

Height and Weight

Emperor Penguins are 36 to 44 inches tall and smaller Blue Penguins are 10 to 12 inches tall. Little Blue Penguins weigh 2 to 3 pounds and Emperor Penguins weigh 60 to 90 pounds.

More About Penguins

Emperor Penguins lay 1 egg and Little Blue Penguins lay 2 eggs.

Penguins don't have any teeth, but they use their beak to catch fish, krill, and squid.

Most penguin's tails are short and in the shape of a wedge. Other penguins have longer tails.

Orca killer whales and sea lions like to eat penguins

Penguins do not live in fresh water. They live in the Arctic cold water.

Penguins can swim and jump out of the cold ice water and land on the ice snow. Also, penguins can slide down hills to the cold icy waters.

All penguins can not fly.
